ABOUT US

Nowadays, more and more people pay close attention to their family and assets's security and safety, RaySharp's mission is to provide easy-to-install, simple-to-operate, high-quality and competitive-priced line of video surveillance products and let people feel safe in their daily life and work.

From SMT workshop, wave soldering workshop, assembling, testing to packing, a complete ISO certificated manufacturing system with 1500 skilled & trained employees had been built to ensure more than 100,000 units DVR/NVR & 400,000 cameras are exported monthly to all over the world. All the products released from RaySharp are CE, FCC certificated and matched to RoHS standard.

More than 250 professional R&D engineers are employed for mechanical design and electron software. We realize that continuous innovation is the core competitive power of RaySharp, and accordingly, no less than 10% of our annual sales are invested in R&D every year to ensure our products always keep abreast with technological innovation.

RaySharp provides OEM and customized service to meet your market requirements. We will continue our aggressive drive to expand our international distribution network and warmly welcome all overseas partner and distributor to cooperate with us in the near future.

AI IP Camera

AI IP Camera

Raysharp new AI Series network camera with enhanced deep learning algorithm supports various intelligent functions and satisfies the requirements in different scenes. This series of network camera has excellent image processing technology and low illuminance environment, also provides real-time active deterrence from crime, intruders and unwanted behavior.

Easy Configuration

Easily and quickly enable a video analysis rule to start enjoying the simplicity and effectiveness AI performance. Users can easily enable an algorithm manually for specific use.

False Alarm Reduction

A new generation AI algorithm accurately senses and distinguishes human and vehicle movements from other moving objects, reducing false alarms.

Quick Target Search

Enables staff to automatically identify footage of people and vehicles, eliminating the high costs of manual searches of video footage

Queue Management

A new generation AI algorithm can detect the number of people waiting in line and the wait time warning.

Density Control by People Counting

Supports people counting when individuals enter and exit a specified area within a certain time frame.

Color-full

Clear, full color images days and night with brilliant detail and clarity for more rapid identification of objects. Also illuminates darkened walkways within cities or buildings.

H.265+ Video Compression

Effective H.265+ video compression technology for bandwidth and storage savings

Simple Third-Party Integration

Allowing third-party integrators the flexibility to use intelligent analysis results. Capabilities can be further expanded with customized project development.

AI Functions

Face Recognition

Adopt deep learning algorithm to extract facial features, then recognize the faces accurately after comparing with the facial pictures in the system.

Face Recognition

AI Search

Gate Control

To control the gate according to the White and Black list by face recognition, which is nice to manage personnel entry and exit.

Mask Detection

Sound a warning notice when someone detected not wearing a mask. To improve the management efficiency of public areas and reduce the cost of manual inspection.

SOD

alarm for the legacy of object and lost of object

legacy of object : Set a specific area in the picture as caution status, once there is something else stay in this area, it could immediately trigger alarm.

lost of object : Set a specific area in the picture as caution status, once the object leave this areas, it could immediately trigger alarm.

AI Functions

Face Attendance

The staff can clock on and off by face, no contact, no feeling, which can reduce bacterial contact or viral cross-infection. Moreover, the face attendance data can be exported as a file and be sent to the specified email address according to the schedule setting.

Regional population statistics

Real time to detect the number of people in a specific area, when the number of people in the area exceeds the limit threshold, an alarm will be sent out to avoid the situation of too dense crowd, which is convenient for on-site management.

Customers flow statistics

Customers flow cycle analysis, repeat visitor statistics, customers flow time period analysis, accurate analysis of customers age and gender, analysis of the proportion of new and old customers, helping sellers to efficiently market.

Queue length detection

Queue length detection, which can detect single-person processing events and real-time alarms when there are too many people in the queue, so that managers can handle abnormal situations in time, improve service efficiency, and enhance customer shopping experience.
